DISTANCE EDUCATION: EXPERIENCE FROM MOSCOW'S UNIVERSITIES 66

This article analyses the development of distance learning. It is based on exploratory research of activities of the universities having distance programs. Document analysis, expert interviews with curators and teachers were done. The results show that, on the one hand, this form of education has not yet found its function and role in Russian higher education and, on the other hand, the need for distance education is high in Russian regions. The results are discussed with regard to the theory of distance learning (especially the point of view of the population ecology theory by G. Carroll and H. Aldrich) as well as the future development of university-based distance education. It is concluded that it may take more than a decade to improve the effectiveness of distance courses

Key words: higher education, distant learning, distance education, population ecology theory, Moscow universities

GAINING EXPERIENCE OF ORGANIZATION OF RESEARCH AND DEVELOPMENT ACTIVITIES

BY FUTURE PHYSICS TEACHERS 109

The paper describes the experience of implementation of innovative study project "Modern Achievements of Science and Technics" addressed to school teachers and students in the city of Saint-Petersburg and Leningrad region. The project was run by Physics Faculty of A.I. Herzen Russian State Pedagogical University. The opportunities of using such project for gaining experience while providing pupils' research-and-development activities by last-terms bachelor-degree and master-degree students are shown. To achieve the goal the students – future Physics teachers assist school teachers at all phases of the project – from task formation to the final conference and publication of abstracts. Examples of pupils' research-and-development projects completed under supervision of university students are provided. The project topics reflect latest achievements of science and technics, including those awarded with the Nobel prize. The projects done by pupils under co-supervision of students are both theoretical and practical. In the latter case most of such projects are done in science and study laboratories of Physics faculty at the Herzen University with the use of modern experimental methods

Key words: teaching of Physics, students' pedagogical practice, study project, pupils' research activities
